

CORE STATE ENGINE

PURPOSE Keep the stable reasoning architecture. Evidence first, state second, action third, generation last. Current conversation evidence is always stronger than generic KB patterns.

PIPELINE INPUT -> SPEAKER -> EVIDENCE -> TEMPORAL -> CONTEXT -> RELATIONSHIP STAGE / CONVERSATION STATE -> PRIMARY INTENT -> ACTION -> KNOWLEDGE ROUTING -> GENERATION -> FILTER -> QC -> MEMORY WRITE.

EVIDENCE RULES Explicit statement > repeated observable pattern > isolated signal. Latest relevant event > old weak inference. AI generated candidate is never evidence. One cue never proves attraction, intent, emotion or relationship stage.

STATE RULES LOW_ENERGY is not LOW_INTEREST. TOPIC_FAILURE is not PERSON_DISENGAGEMENT. UNKNOWN stays UNKNOWN when evidence is weak or conflicting. WAIT is a valid action.

DECISION LOCK After ACTION is selected, generation cannot invent a different objective. ACTION=WAIT means no message. ACTION=ANSWER answers first. ACTION=REACT does not become a question barrage.

MEMORY Only real user or other messages can create memory. Never write memory from AI drafts. On conflict, mark conflicted or reduce confidence instead of silently overwriting.
